

Did you know:

-  Over 32 billion cigarette butts are smoked and thrown away each year in Australia. 32,000,000,000.
-  Over 99% of all cigarettes are now smoked outside and more than one out of every three butts ends up as litter.
-  Cigarette butts are not 'just paper & cotton'. They're Cellulose Acetate (plastic) and take from 4 to 15 years to breakdown.
-  Every year in Australia property is damaged and people are killed as a direct result of fires started by discarded cigarette butts.
-  Butts contain over 4,000 chemical compounds. 3,000 of them are toxic. Cigarette butts are the most littered item on the planet.
-  Butts look terrible and tarnish the appearance of any location.
-  Butts have been found in the stomachs of fish, sea mammals, animals and birds. They're disgusting - and they're everywhere.
-  Most smokers do in fact like to 'do the right thing'. Our Personal Ashtrays give smokers the ability to properly dispose of their butts, no matter where they are. And they're as easy to carry as a lighter.
-  It is NEVER acceptable to toss, drop or flick cigarette butts away. It is also illegal and on-the-spot fines of up to \$600 can apply. If the case goes to court, you can be fined up to \$2,000.
-  This has nothing to do with the issue of smoking. It's simply that everyday more organisations are realising that they do have a crucial role to play in reducing the cigarette butt litter caused by their own customers, patrons, visitors & staff, etc - and that there are in fact many advantages in assisting their smokers to do the right thing.
-  The problem may be prolific - but the solution is simple.
-  Smokers can safely and easily dispose of their used butts properly by always carrying a Mini-Butts Personal Ashtray.

No Excuses. Cigarette Butts ARE Litter.

If you smoke, always carry a Personal Ashtray.
The world is not your ashtray. No Butts about it.

The Butts Stop Here.
